A clear look at your child's vision: today and in the future

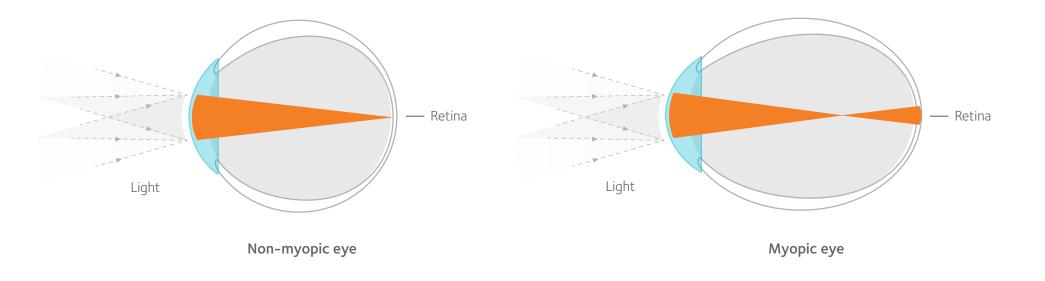

BRILLIANT OF FUTURES

What is myopia?

Myopia is more **commonly referred to as nearsightedness**, or the inability to see objects clearly at a distance.

The myopic eye is longer than the non-myopic eye. Generally, the longer the eye, the worse the person's vision.

Causes of myopia

Genetics

Myopia in children **increases when parents are myopic**.¹ The likelihood of children developing myopia increases:

1 in 2 when **both parents** are myopic

1 in 3 when **one parent**

is myopic

1 in 4 when **neither parent** is myopic

Lifestyle

Research shows that **modern lifestyles** may influence the development of myopia.

Insufficient time spent outdoors.^{2,3}

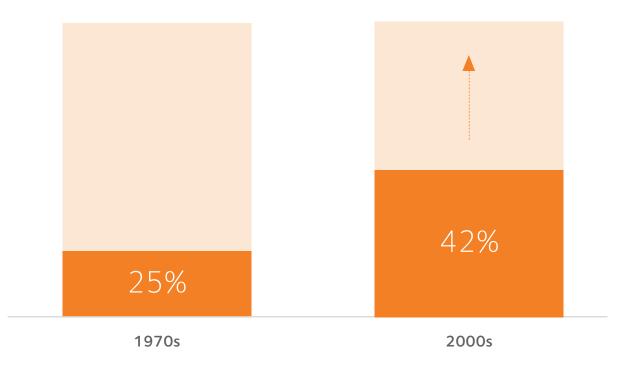

Prolonged time spent reading and playing or working with digital devices, like smartphones or tablets^{2,4}

Poor lighting levels^{2,4}

Global Trends in Myopia Management Attitudes and Strategies in ClinicalPractice. *Cont Lens Anterior Eye.* 2016;39(2):106–16.

Myopia is becoming more widespread and more severe than ever^{1,2}

In the early 1970s, only 25% of Americans were nearsighted.³ Today, more than 40% of Americans are myopic, and that number is **increasing at an alarming rate**, especially among school-age children.³

01

Introduction to myopia management

Long-term implications of myopia

Leaving myopia unmanaged may contribute to more severe eye health complications and sight-threatening conditions later in life, including¹⁻⁴:

Retinal detachment

Myopic maculopathy

Glaucoma

Cataracts

Myopia is commonly diagnosed in childhood. Myopia can progress and worsen over time, **leading to more severe sight conditions later in life**.

Myopia management today

Additional benefits of choosing a myopia management approach

In the short term, benefits of a myopia management approach look very similar to correcting vision with traditional soft contact lenses.

Short-term benefits include:

Corrected vision¹

for effective daily activities, such as schoolwork

A more comfortable experience² vs. wearing glasses

No glasses to lose or break Accommodates a more active lifestyle²

vs. wearing glasses

Myopia management today – for the future

Long-term benefits of choosing a myopia management approach

For children who begin a myopia management program between 8 and 12 years of age, their vision will not only be corrected today, but **the progression of myopia over the child's growing years may be slowed, potentially minimizing the long-term impact of myopia**.

Benefits include all of the short-term advantages, plus:

Impact

over eyeball development and elongation¹

Slowing

of worsening nearsightedness¹

Potential reduction

in the complications that are more frequent in nearsighted patients, like retinal detachment, glaucoma, and cataracts²⁻⁵

Myopia assessment chart

ASSESSMENT CHART

Myopia assessment

How do I know if my child needs a myopia management program?

Risk Levels

Low

>+0.75DS at age 6 or younger¹

Recommendation:

- Limit hours spent on close work outside of school
- Encourage at least two hours of outdoor time per day²

Medium

≤+0.75DS at age 6 or younger¹

Recommendation:

- Watch for large changes in prescription over a short period of time
- Limit hours spent on close work outside of school
- Encourage at least two hours of outdoor time per day²

High

Myopia confirmed at ages 8-12

Recommendation:

- Schedule a follow-up appointment
- Consider enrolling in a myopia management program
- Limit hours spent on close work outside of school
- Encourage at least two hours of outdoor time per day²

03

Brilliant Futures™ Myopia Management Program

BRILLIANT FUTURES™ MYOPIA MANAGEMENT PROGRAM

More than vision correction

Brilliant Futures[™] Myopia Management Program

is a comprehensive approach to myopia management built around MiSight[®] 1 day contact lenses, the first and only contact lens FDA-approved for slowing the progression^{*} of myopia in children who begin wearing the lens between the ages of 8 and 12.^{**}

Program details:

- An annual supply of MiSight[®] 1 day daily disposable lenses
- Free shipping and free returns whether the prescription changes or not
- Program transparency; office visits outlined for the entire year

- Access to online support tools
- A helpful app with reminders and a way to track program progress

*Indications for use: MiSight[®] 1 day (omafilcon A) soft (hydrophilic) contact lenses for daily wear are indicated for the correction of myopic ametropia and for slowing the progression of myopia in children with non-diseased eyes, who at the initiation of treatment are 8-12 years of age and have a refraction of -0.75 to -4.00 diopters (spherical equivalent) with ≤ 0.75 diopters of astigmatism. The lens is to be discarded after each removal.

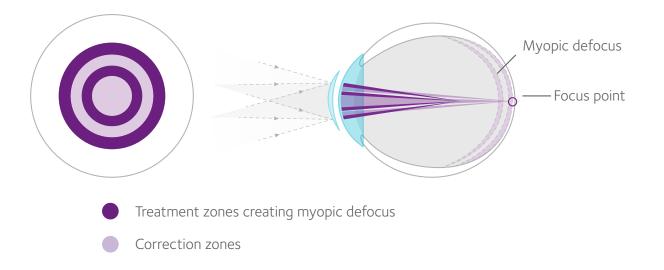

BRILLIANT OFUTURES" MYOPIA MANAGEMENT PROGRAM

**Compared to a single vision 1 day lens over a 3 year period. Based on a clinical study in which participants were between the ages of 8 and 12 at initial fit.

How MiSight[®] 1 day works

The **ActivControl™ technology** in MiSight[®] 1 day uses vision correction zones and treatment zones within the lenses to slow the elongation of the eyeball.¹⁻³

By including both types of zones in the lens, it simultaneously corrects the child's vision today, while training the eye to resist changing shape, with the goal of preserving vision for the future.
